PROFESSIONAL SUMMARY

Software Engineer with 5+ years of experience building scalable enterprise applications and cloud-native solutions using C#, .NET, Angular, Microservices, and Microsoft Azure. Strong expertise in designing RESTful APIs, distributed systems, event-driven architectures, and secure multi-tenant platforms. Hands-on experience with Azure Functions, API Management, Service Bus, Cosmos DB, AKS, Docker, CI/CD, and observability. Experienced in taking features from design and development through deployment and production support.

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, Python

Frameworks / Libraries: .NET, .NET Core, ADO.NET, Entity Framework, Dapper

Backend: Web API, RESTful Services, ASP.NET MVC, LINQ

Cloud: Azure Functions, Azure API Management, Azure Service Bus, Azure Blob Storage, Azure Key Vault, AWS EC2

Frontend: Angular (v12-v21), Bootstrap, Angular Material

Databases / Storage: SQL Server, PostgreSQL, Cosmos DB, Memcached, Redis Cache, Vector Database

DevOps: Azure Devops, ACR, AKS, Docker, Jenkins, Git, IIS

AI-Assisted Tools: GitHub Copilot, Claude Code, Model Context Protocol (MCP), Figma MCP

EXPERIENCE

Software Engineer at Aashvi Infotech

July 2024 – Present

- KCC Digital Gateway APP for Audit Portal (Ongoing)

Tech Stack: Angular 21, .NET Core 10, SQL, Cosmos DB, Azure AD, Azure Functions, Azure DevOps

Enterprise audit gateway platform enabling auditors and external clients to access Audit Platform and integrated audit applications through unified, secure multi-tenant architecture.

- Architected and developed **micro frontend (MFE) host application** using Native Federation, enabling independent development, deployment, and runtime loading of audit applications.
- Designed and implemented **reusable UI component library** published to private Verdaccio npm registry, ensuring consistent design system across 4+ micro frontend applications.
- Designed and exposed RESTful APIs through Azure API Management (APIM), implementing API routing, policies, authentication, throttling, and centralized API governance.
- Implemented Azure Functions with Cosmos DB Change Feed trigger to automatically capture data changes and process audit events asynchronously, improving audit tracking and reducing manual processing.
- Integrated role-based and attribute-based access control (RBAC/ABAC) with Microsoft Entra ID, supporting secure multi-persona authentication.
- Configured Azure Key Vault for secure management of application secrets, connection strings, and sensitive configuration.
- Configured Azure Application Insights for distributed tracing, telemetry, and logging across microservices architecture.
- Deployed containerized .NET applications to Azure Kubernetes Service (AKS) using Docker images and Kubernetes/Helm configurations.
- Used GitHub Copilot to support .NET backend development and accelerate feature implementation, debugging, and refactoring, code review, and security practices.
- Used Model Context Protocol (MCP) with Figma-based development workflows to provide AI-assisted access to design context and accelerate Angular frontend implementation.

- IGaming Platform

Tech Stack: Angular 19, .NET Core 6, Azure, SQL Server, Memcached, SignalR

A microservices-based gaming platform with dedicated gateways for Admin, Gaming Platform, Agent, and background services, leveraging Memcached for high-performance caching.

- Built real-time notifications with SignalR, cutting latency by **80%** and improving live updates for players.
- Migrated asset storage from FTP to Cloudflare R2, reducing delivery costs 30% and load times 50%.
- Converted continuous-running background jobs to timer-based execution, lowering server memory use 35% and enabling dynamic scheduling.
- Upgraded the platform from a single-wallet to a **multi-wallet architecture**, enabling support for both fiat and cryptocurrencies by integrating 2 payment providers across various currencies.
- Used Claude Code as an AI-assisted development tool to support codebase exploration, debugging, refactoring, and feature implementation.

- Business-To-Business Platform

Tech Stack:

Angular 16, .NET Core 6, Web API, Entity Framework, PostgreSQL, Azure

An online platform for sales personnel, dealers, and distributors to order products. Integrated with SAP ERP for seamless transaction processing.

•

Developed Excel import/export functionality for bulk order management, streamlining product ordering workflow for sales teams and distributors (Angular, Web API, EPPLUS 6).

•

Implemented secure FTP-based PDF ledger downloads and transactional email notifications via SMTP.

•

Configured data sync with SAP ERP via HttpClient, processing **10K+ transactions daily**.

•

Developed a .NET Background Service to automate SAP ERP integration, ensuring seamless post-registration user status updates and order/item status synchronization.
- Procure-To-Pay

Tech Stack:

Angular 16, .NET Core 8, Web API, PostgreSQL, Jenkins, AWS

Streamlined and automated the organization’s procurement workflow, improved procurement process.

•

Automated procurement process with dynamic role-based access, reducing approval cycle time by **40%** and eliminating manual intervention for routine orders.

•

Deployed the application to Windows Server 2019 (IIS 10.0) via Jenkins CI/CD for dev and staging environments.

- E-Learning Platform

Tech Stack:

Angular 12, RxJS, OpenLayers, ZOHO

Online Learning Platform with location and landmark features, supporting multiple languages.

•

Architected multi-language support for the Indian market across 3 regional languages using RxJS and Angular i18n, improving platform accessibility and adoption.

•

Integrated landmark features and interactive maps using the OpenLayers v10 library.
- SAP Data Synchronization Service

Tech Stack:

.NET Core 6, Entity Framework, Dapper, SQL Server, ODBC

High-performance cron-based Windows Service for Gate Pass Management System.

•

Automated SAP HANA-to-SQL Server synchronization, eliminating 10+ hours/week of manual data handling and achieving 100% reporting accuracy.
- Machine Reporting System

Tech Stack:

.NET Framework 4, ADO.NET, SQL Server, HighCharts, WebForms

Real-time monitoring system for industrial equipment with automated alerting.

•

Created dynamic dashboards using HighCharts v4 to visualize temperature trends.

•

Automated scheduled email alerts via SQL Server jobs to support temperature graph monitoring.

•

Optimized complex stored procedures, views, and functions to process & improve reporting performance by 35%.

EDUCATION

Silver Oak College of Engineering and Technology	09/2018 – 08/2020
M.E. - Electronics and Communication	GTU, Ahmedabad
G H Patel College of Engineering and Technology	08/2013 – 08/2017
B.E. - Electronics and Communication	GTU, Anand
Parul Polytechnic Institute	08/2010 – 07/2013
Diploma - Electronics and Communication	GTU, Vadodara
